

Mateusz Makowski

Full-stack developer

PROFILE

Former chef turned self-taught software developer, I approach building applications with the same care and precision I once reserved for baking bread. With 5 years of hands-on experience, I specialize in creating thoughtful, user-friendly interfaces and have contributed to international projects in industries like gambling and e-commerce. I'm currently expanding my skill set toward full-stack development, always striving to write clean, maintainable, and meaningful code that solves real-world problems

EDUCATION

09.2015 - 07.2018
The University of Szczecin
Cognitive Science of Communication - Bachelor Degree

EXPERIENCE

07.2021 - present
SB SOFTWARE
Frontend Developer

- Developed a customer bank verification and registration system using a third-party provider with SSE, Next.js, and TypeScript — reduced verification time by 40% and improved registration success rate by 25%.
- Led an internal training session on Cypress automation and cybersecurity best practices — enhanced team efficiency and awareness, with 100% participation and positive feedback from attendees.
- Designed and automated end-to-end tests with Cypress to streamline and enhance the development process
- Integrated gambling products for international clients, including payments, withdrawals, betting actions, and marketing features, utilizing React.js, React Router, Redux, and TypeScript
- Assisted fellow developers with answering queries, code review, and technical guidance

03.2020 - 06.2021
IAIS.A
Junior Frontend Developer

- Implemented purchase functionality for individual clients using JavaScript, jQuery, HTML, and LESS
- Developed e-commerce platforms for individual clients utilizing jQuery, XML, JavaScript, HTML, and LESS

ADDITIONAL SKILLS

React-Native, TailwindCSS, ReactQuery, Git, Cursor, Recoil, Prompt Engineering, Styled Components, SEO, Figma, Axios, SCSS, jQuery, Node.js, Express, Python

PERSONAL INFORMATION

-  +48 883 474 273

LANGUAGES

English - B2
Polish - Native Speaker

PROJECTS

Discord bot - Side project
Developed a Discord bot in Python that tracks user activity in voice channels. The bot logs when users join and leave voice channels, storing this data in a MongoDB database for further analysis. Deployed the bot on a Raspberry Pi, running continuously as a background service. This setup enables lightweight, real-time monitoring of user presence on the server.

RSS-READER - Side project
Built an RSS reader application capable of parsing XML feeds and displaying articles from multiple sources. The tool includes features for marking articles as read/unread and saving favorites for later reading. Designed with a focus on simplicity and usability, enabling users to keep track of new content efficiently

CERTIFICATES

Fundamentals of AI Agents - Hugging face
The Hard Parts about Javascript - Frontend Masters by Will Sentance
